

# Waste Water Disposal through an Injection Well

## Florida City, Florida

---

*An electric-powered rig is drilling 3,500 feet below land surface.*

### Key Project Areas

Power Utility

Injection Well

Turnkey Construction

Exploratory Drilling

Layne was hired to drill a Class V Exploratory Well to investigate the feasibility of a Class I Industrial Injection Well for the disposal of waste process water. The well is a tubing and packer design with 2,890 ft. of 18-inch FRP tubing. The project also included a dual-zone monitoring well.

Layne was working in an environmentally-sensitive wildlife habitat bordering a highly-secured facility. By using an electric-powered rig, we minimized both noise pollution and the amount of the hydrocarbons stored on site.
