

Permian Basin Water Sourcing

PROJECT PROFILE
WATER MANAGEMENT

CLIENT
Major Permian Operator

SOURCING WATER FOR OIL AND GAS CLIENTS

Midland, TX

SITUATION:

Permian basin is the most active oil and gas producing area in the country. Located in west Texas, the area's arid conditions have been exacerbated by severe drought. As a result, economically developing a sustainable water supply of sufficient quality and quantity for drilling is increasingly important as a key element of a successful operation.

SOLUTION:

Energy Services was able to identify, drill, and complete water supply wells in the Santa Rosa aquifer in a safe and sustainable way. The operator has reported excellent results, and is interested in expanding the contract for drilling, and perhaps engage Energy Services for other transfer and treatment services.

SERVICES EMPLOYED:

- + Drilling
- + Completion
